

SLOP DETECTOR

AI CONTENT, MANIPULATION & MISINFORMATION AUDIT WORKFLOW

WHAT IS THE PROBLEM?

THE SPREAD OF MISINFORMATION

Content arrives in many formats → text, images, PDFs, social posts, reels

Detection requires both rules + reasoning.

High volume → slow & expensive.

No audit trail → zero transparency for decisions

OUR SOLUTION

We built a reusable automation that:

01

DETECTS AI GENERATED CONTENT

02

FLAGS MISINFORMATION

03

GENERATES A FULL AUDIT REPORT

04

IDENTIFIES IMAGE
MANIPULATION

05

ROUTES BORDERLINE CASES TO
HUMAN REVIEW

DESIGNED AS A PLUGIN OR EXTENSION FOR:

BROWSERS AND
NEWS ARTICLES

ANY HIGH-VOLUME
SOCIAL CONTENT
STREAM

INSTAGRAM REELS
AND TIK TOK
VIDEOS

INTAKE LAYER

Accepts 5 different inputs.

Parallel processing ensures fast analysis, supporting high-volume feeds like 100+ social posts at once.

1. PDFs
2. Images
3. Text
4. JSON
5. API data from public sources

UNDERSTANDING LAYER

METADATA

We run specialized agents:

1. AI likelihood detection
2. Linguistic anomaly detection
3. Image manipulation/AI detection
4. Claim extraction & fact preparation
5. Metadata checks & pattern validation

DECISION LAYER

TWO LAYERS:

1. DETERMINISTIC RULES

- text length
- OCR quality
- metadata missing
- misinformation signals
- manipulation risk
- AI score thresholds

2. AI SCORING ENGINE

- AI likelihood
- misinfo risk
- virality
- metadata penalty
- manipulation likelihood

REVIEW LAYER

❖ AGENTIC REVIEW:

- Enforces policy
- Overrides unsafe output
- Confirms inconsistencies

❖ HUMAN REVIEW

Triggered when:

- Low confidence
- Borderline score
- Contradictory signals
- Missing metadata

THIS KEEPS A **HUMAN IN THE LOOP**, REQUIRED FOR RESPONSIBLE AI.
